

think-cell layout

The PowerPoint® add-in think-cell layout enables the rapid design of clean slide layouts from standard elements. Using its patented user interface you only define the overall layout, the shapes are placed automatically and precisely.

The problem

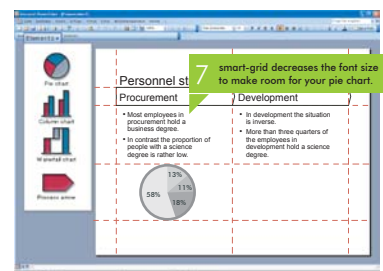

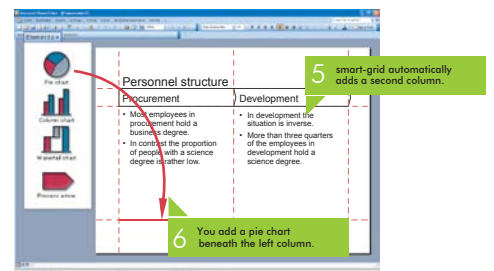

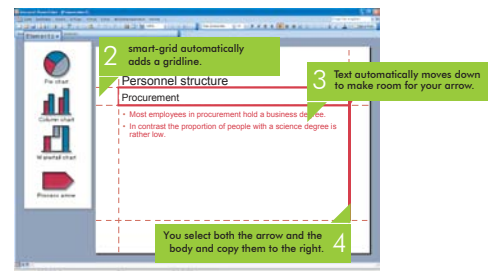

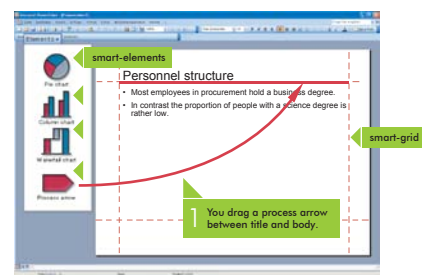

Did you ever ask yourself why laying out presentation slides is so time-consuming? One of the main problems is that you have to carefully adjust the position of every element with the mouse, resize boxes or arrows to make text fit inside or next to them or adjust table column widths by hand.

When you make a change to your slide, for example removing or adding an element or editing the text, you often need to readjust the whole layout to make everything fit again.

The solution

think-cell layout solves these problems with its *smart-grid* user interface. We provide you with a library of presentation elements, exactly matching the professional's presentation needs. You simply drag these *smart-elements* onto the slide and snap them into an adaptive grid. All elements adjust their size and position automatically according to their content, but maintain the layout that you defined.

Following this scheme you can create and alter complex layouts with only a few mouse interactions. Of course, you can still adjust everything manually.

Key benefits

Presentation-ready quality

With think-cell layout you have the experience and skills of seasoned PowerPoint experts at your fingertips. Forget about working in the "400%" zoom mode. Automatic placement is always precise. And stop wondering what kind of shape your corporate design tells you to use when visualizing a take-away message. think-cell layout automatically makes the right choices.

Highest-possible efficiency

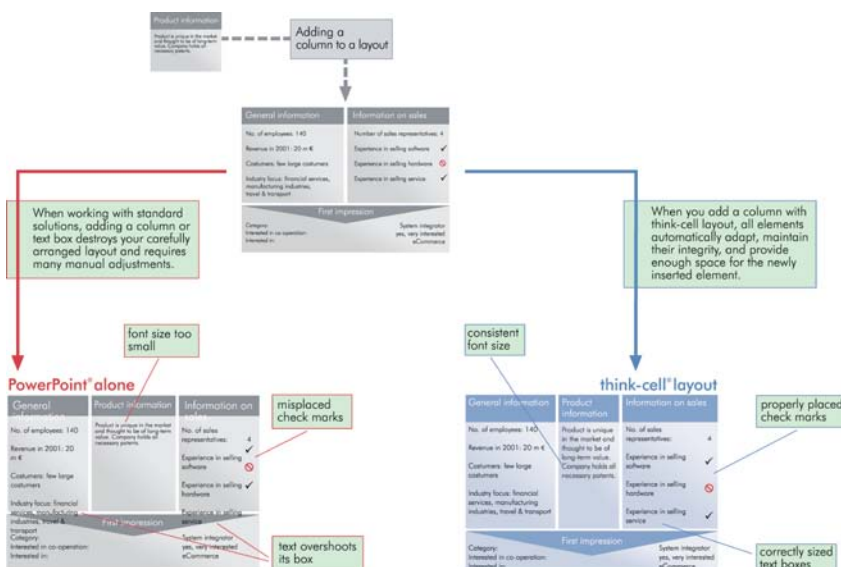

Changing PowerPoint slides can be a nightmare, because a slight change can destroy the whole layout. With think-cell layout you can concentrate on the change itself. The consequences of the change are automatically propagated to the surrounding elements.

Full compatibility

think-cell layout completely integrates into the working environment you are used to. It uses the same file format as PowerPoint and all your slides remain editable even without think-cell layout.

Ease of use

Just as our other software products, think-cell layout is designed for ease of use. We don't use menus, wizards, dialogs or property pages. Simple drag-and-drop concepts allow even novice users to quickly master the design of complex slides.

Selected features

think-cell layout
PowerPoint

Shapes with text

- Predefined shapes
- Customized shapes
- Shapes with special user interface

Manual layout

- Grid
- Snap to grid / object
- Presentation guide lines
- Slide guide lines
- Alignment robust to changes

Automatic layout

- Layout templates
- Automatic arrangement
- Automatic sizing
- Automatic formatting
